BIOPHYS. ACTA 1328:83-89(1997).

FUNCTION: RECEPTOR FOR NEUROPEPTIDE Y AND PEPTIDE YY. THE ACTIVITY OF THIS RECEPTOR IS MEDIATED BY G PROTEINS THAT INHIBITS ADENVLATE OF THIS RECEPTOR IS MEDIATED BY G PROTEIN HAT INHIBITS ADENVLATE CYCLASE ACTIVITY. SEEMS TO BE ASSOCIATED WITH FOOD INTAKE. COULD BE INVOLVED IN FEEDING DISORDERS (BY SIMILARITY).

SUBCELLULAR LOCATION: INTEGRAL BY SIMILARITY.

SUBCELLULAR LOCATION: INTEGRAL OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HIGHEST TO TACHYKININS RECEPTORS.

                                                                                                                   DEVELOPMENTAL STAGE: THE BETA FORM IS EXPRESSED IN EMBRYONIC DEVELOPMENTAL STAGE (7 AND 11 DAYS). THE BETA FORM IS AN EMBRYO AND A BONE MARROW FORM OF NPI-R, WHICH DECREASES IN THE EXPRESSION DURING DEVELOPMENT AND DIFFERENTIATION.

SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS. HIGHEST TO TACHYKININS RECEPTORS.
                                                                                                                                                                                                                                            SUBCELLULAR LOCATION: Integral membrane protein.

ALTERNATIVE PRODUCTS: 2 ISOFORMS; NPY1-R ALTERNATIVE SPLICING.

NPY1-R BETA; ARE PRODUCED BY ALTERNATIVE SPLICING.

TISSUE SPECIFICITY: THE ALPHA FORM IS HIGHLY EXPRESSED IN THE BRAIN, HEART, KIDNEY, SPLEEN, SKELETAL MUSCLE, AND LUNG, WHEREAS THE BETA RECEPTOR MRNA WAS NOT DETECTED IN THESE TISSUES. HOWEVER, THE BETA FORM IS EXPRESSED IN MOUSE EMBRYONIC DEVELOPMENTAL STAGE (7 AND 11 DAYS), BONE MARROW CELLS AND SEVERAL HEMATOPOIETIC CELL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CHLTAMISTCVNPIFYGFLNKNFQRDL 326
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CHLLGMMSCCLNPILYGFLNNGIKADL

G protein-coupled receptor UHR-1 - rat
C;Species: Rattus sp. (rat)
C;Date: 10-Sep-1999 #sequence_revision 10-Sep-1999 #text_change
C;Accession: 152315
R;Welch, S.K.; O'Hara, B.F.; Kilduff, T.S.; Heller, H.C.
Biochem. Biophys. Res. Commun. 209, 606-613, 1995
A;Title: Sequence and tissue distribution of a candidate G-coupl
A;Reference number: 152315; MUID:95251659; PMID:7733930
A;Accession: 152315
neuropeptide Y receptor - fruit fly (Drosophila melanogaster)
N;Alternate names: G protein-coupled receptor PR4
C;Speciles: Drosophila melanogaster
C;Date: 16-Sep-1992 #sequence_revision 16-Sep-1992 #text_change
C;Accession: A41738

RESULT 13
B40470
glucocorticoid-induced receptor precursor, short form RP23 - mouse
C;Species: Mus musculus (house mouse)
C;Date: 14-Feb-1992 #sequence_revision 14-Feb-1992 #text_change 20-Apr-2000
C;Accession: B40470
R;Harrigan, M.T.; Campbell, N.F.; Bourgeois, S.
Mol. Endocrinol. 5, 1331-1338, 1991
A;Title: Identification of a gene induced by glucocorticoids in murine T-ce.
A;Reference number: A40470; MUID:92123228; PMID:1663214
A;Accession: B40470
A;Accession: B40470
hypothetical protein F41E7.3 - Caenorhabditis elegans c; Specles: Caenorhabditis elegans C; Date: 15-Oct-1999 #sequence_revision 15-Oct-1999 #te C; Accession: T22076 R; Lennard, N. submitted to the EMBL Data Library, November 1995 A; Reference number: Z19509
